

Cloud Migration

National school for public
administration

Case study

CLOUD MIGRATION – NATIONAL SCHOOL FOR PUBLIC ADMINISTRATION

NEOS EDUCATOR IN ORACLE CLOUD – CLOUDBET

About National school for public administration

National School for Public Administration was founded by the Croatian government in 2010. The school's main goal is to conduct professional training available to all public officials. Application provides support for all processes present in educational institutions, private and public schools.

NEOS/Educator - application system:

NEOS/Educator is a modern application system, based on the latest Oracle technology, Oracle Database 12c. The application is web-oriented, providing internal and external users with modern, easy-to-use interface, providing a more effective user experience in their daily tasks execution.

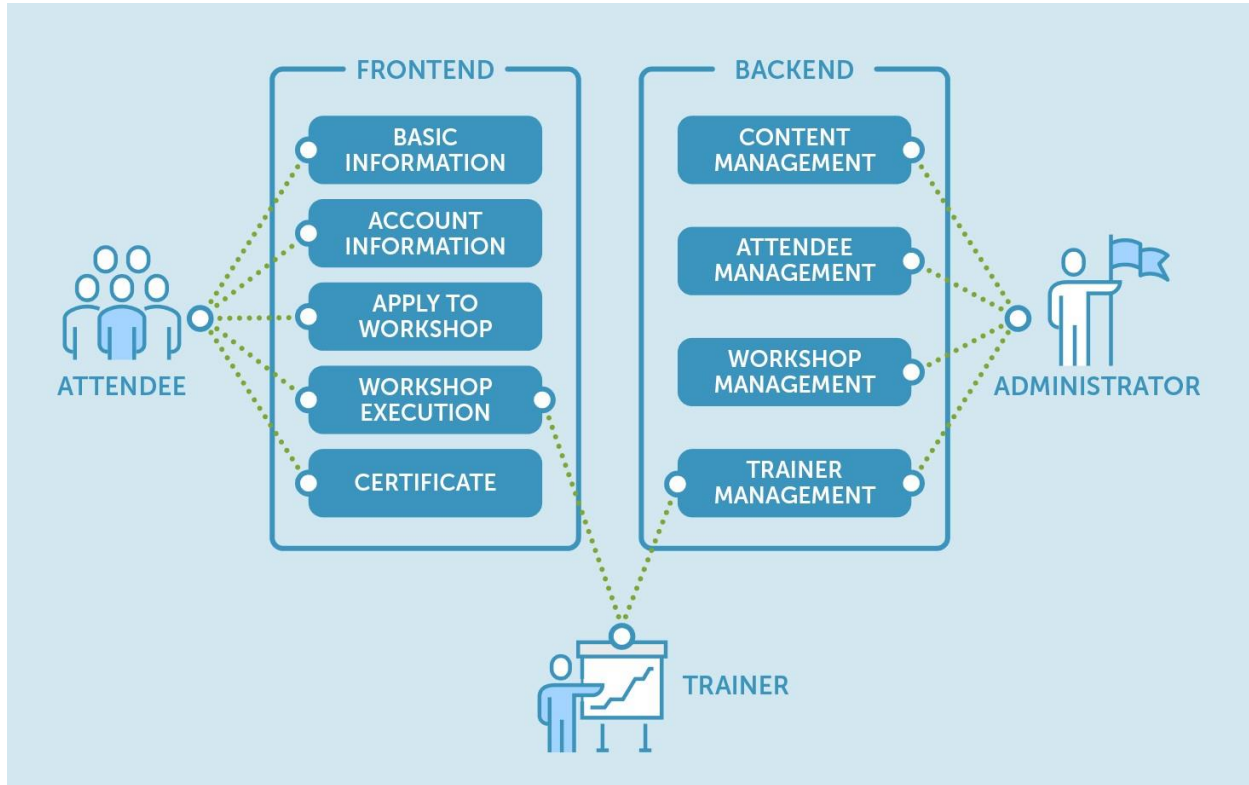

The application is divided in two main parts, which have separate user interfaces - student (external) interface and internal administration interface, each with its own specific use, including general information and account management information and allowing input of personal data and registry for specific workshops.

It is developed in order to successfully perform the task of daily organizing and tracking of the professional lectures and trainings.

NEOS/Educator application provides support for all processes present in educational institutions, private and public schools. It has been developed in order to successfully perform the task of daily organizing and tracking of the professional lectures and trainings. The solution meets all requirements of simple, rapid and effective service provision.

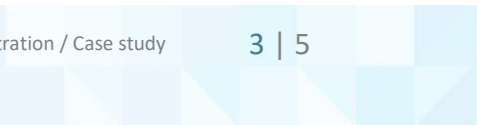

Functionalities:

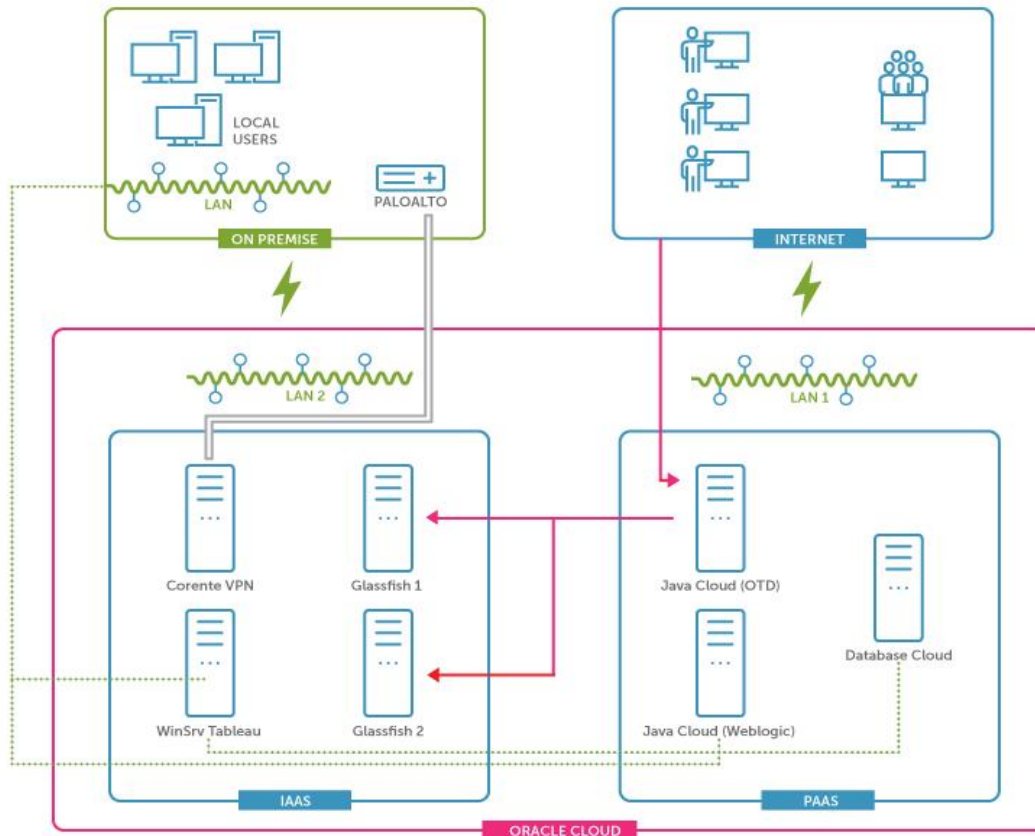

In order to simplify and modernize the School's core business functioning, Neos developed a solution that meets all the requirements of a simple, rapid and effective service provision.

Graphic above shows most significant use-cases that is a basis for the IT solution.

Architecture AS-IS - Oracle Cloud:

Benefits:

User now have

1. Automatic backup and logging of key metrics
2. Greater flexibility and collaboration for employees
3. Less infrastructure complexity
4. Reduced operational costs

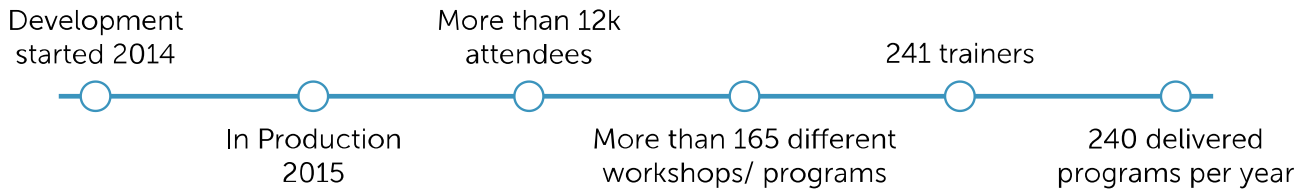

Timeline:

Migration was done in 2 months through several phases.
